Annexure-A

Brief Specifications of the Equipment:

- Ball milling machine is used to grind or mill materials into fine powders through the use of grinding media (typically steel or ceramic balls) inside a rotating cylindrical chamber.
- The general purpose of a ball milling machine should be able to reduce particle size, mix materials, and produce fine powders. Its versatility makes it valuable for grinding, homogenizing, chemical reactions, and nanomaterial production, among various applications.

Features:

- Versatile Grinding: Should be capable of grinding a wide range of materials, from minerals to ceramics and chemicals.
- Variable Grinding Media: Should be compatible with different sizes and types of grinding media (e.g., steel, ceramic) for specific applications.
- Batch Operation: Should be used in batch mode (Manual or Automatic operation) for laboratory/small-scale or research purposes.
- Energy Efficient: Should be designed with low energy consumption and high output efficiency, reducing operational costs.
- Durable Construction: Built with wear-resistant materials to ensure long-lasting operation and minimal maintenance.
- Ease of Maintenance: Components such as grinding media and drum linings are easy to access and replace.
- Noise Reduction: Features designed to reduce operational noise during grinding, improving work environment. (Noise Level: <70 dB during operation)
- Portable Design: Should be of laboratory-scale models, with portability options for flexible use.
